

ABSTRACT

A double-faced splicing tape of the present invention
splices a first web used for forming a tobacco rod and a
5 second web in a stand-by state to and has a plurality of
perforations extending in a longitudinal direction of the
webs. Furthermore, the present invention provides a
feeding device for making the double-faced splicing tape
hang toward a feeding position located in between a main
10 delivery path of the first web and a sub-delivery path of
the second web.
